The Details – In a Picture

The Bore - *From The Muzzle* - 10 Seconds

We already know it's closer to 5

1911 2011 *Happy 100th Anniversary!*

*** About the 'GAP'**

- With the magazine removed and the slide locked open, any rearward pressure on the slide face would cause the slide to close. *Not good!*
- In contrast to the custom *BORE SWEEPER* for revolvers, the Bumper Pad does not contact 'anything'. For semi-autos, the barrel travels *inside* the *BORE SWEEPER* housing. It keeps traveling until the Muzzle Guard spring is fully compressed, at which point all further movement comes to a halt.
- All *BORE SWEEPERS* for semi-autos are designed to keep the Bumper Pad well away from the slide face.
